

Nexolve — Website Design Review: Client Requirements Specification

Field	Value
Document ID	NEXOLVE-REQ-001
Version	1.0
Date raised	07 Aug 2026
Source	Client review call (voice note), translated and formalised
Repository	<code>nexusnao-proj/nexolve-new</code>
Addressed to	Frontend / design implementation team
Pending input from	Maaz (design and brand approvals, logo licensing)

1. Executive Summary

The client's overall assessment is **positive**: the information architecture, content quality, and structural foundation are considered strong and fit for purpose. No changes to sitemap, page structure, or copy substance are requested.

The feedback is **exclusively presentation-layer**. The recurring theme across every page is that the site currently reads as a **slide deck rendered in HTML** rather than a web-native experience — specifically:

1. **Excessive reliance on rectangular tile/block grids** as the default layout primitive across Services, Industries, Work, Insights, and Stack sections.
2. **Insufficient use of the brand blue** — colour is concentrated in the hero/first viewport, after which the site becomes uniformly white/grey.
3. **Flat, unstyled backgrounds** — large empty white and solid-grey areas with no texture, pattern, or motion.
4. **Text-only data presentation** where iconography, logos, or graphical treatment is expected.

The client's summary position: *structure and foundation are strong; refinement only, then good to go.*

2. Scope

In scope: visual design, layout patterns, colour system, background treatment, iconography, imagery selection, motion/animation, form styling, and minor copy tone adjustments.

Out of scope: information architecture, navigation structure, page inventory, content substance, backend/CMS work.

3. Requirement Conventions

- **Priority** values are proposed by the implementation team and require client confirmation. (P1) = blocks sign-off, (P2) = expected in this revision, (P3) = nice-to-have.
 - **AC** = Acceptance Criteria.
 - Requirements marked [DEP] have an external dependency and cannot be closed unilaterally.
-

4. Global / Cross-Cutting Requirements

GR-01 — Establish a site-wide colour rhythm

Priority: P1 **Current state:** Brand blue is used almost exclusively in the first viewport of the home page. All subsequent sections and all interior pages render in white and neutral grey.

Requirement: Introduce a deliberate alternating colour rhythm so that brand blue recurs at regular intervals down the page — the client's guidance is approximately *every other section*. Interior pages must not be uniformly white. **AC:**

- No vertical scroll span exceeding two consecutive sections renders without a brand-colour surface, accent, or gradient.
 - A documented section-background token set exists (e.g. (surface/white), (surface/tint-blue), (surface/deep-blue)) and is applied consistently across all pages.
-

GR-02 — Replace flat backgrounds with treated backgrounds

Priority: P1 **Current state:** Backgrounds are plain white or solid grey with no visual interest.

Requirement: Every major section background must carry a subtle treatment rather than a flat fill. Client-suggested motifs:

- Geometric patterns
- Subtle checkered / grid textures
- Graph-style line work
- Neural-network / node-and-connector line graphics with lines extending out of frame
- Light ambient animation

AC:

- No full-width section renders on an untreated flat fill.

- Background treatments are decorative only: they must not reduce text contrast below WCAG AA, and must respect `(prefers-reduced-motion)`.
 - Animated backgrounds are GPU-composited (`(transform)` / `(opacity)` only) and do not degrade Lighthouse performance score below the current baseline.
-

GR-03 — Move away from the uniform tile/block layout primitive

Priority: P1 **Current state:** Services, Industries, Work, Insights, Stack, and Impact all resolve to visually similar rectangular card grids. The client's description: "*copy-paste deck*", "*block block block*". **Requirement:** Diversify layout patterns across sections. Where a grid remains the correct structural choice (the client accepts that blocks are sometimes unavoidable), the surrounding treatment must differentiate it — via background, depth, gradient, hover state, asymmetry, or motion. **Design approach directed by client:** Solve one page/tab to a high standard first; once that pattern is approved, replicate the established system across the remaining tabs. **AC:** Two adjacent sections never share an identical card geometry, elevation, and background treatment.

GR-04 — Extend the hero motion language below the fold

Priority: P2 **Current state:** Motion and animation are present only in the top hero area. Everything below is static. **Requirement:** Carry a lighter, consistent variant of the hero's motion language into lower sections (subtle background animation, scroll-triggered reveals) so the page reads as a continuous experience rather than a sequence of static slides. **AC:** Scroll-linked or ambient motion is present in at least three sections below the fold on the home page, gated behind `(prefers-reduced-motion)`.

GR-05 — Introduce depth and elevation to card components

Priority: P2 **Requirement:** Cards and tiles currently sit flat on the page. Apply gradient fills, shadow/elevation, and hover-state lift so components read as raised surfaces. Client's phrasing: "*thoda uth ke aa sakein*" — they should lift off the page. **AC:** A defined elevation scale exists and is applied consistently; interactive cards have a distinct hover/focus state.

GR-06 — Logo usage rights confirmation [DEP]

Priority: P1 (blocking for GR-07, HP-08, AB-01) **Requirement:** Multiple requirements call for third-party product and client logos (SAP, Ariba, Coupa, Oracle, Fieldglass, DocuSign, S/4HANA, and others). Confirm with Maaz which logos may be displayed and under what trademark/brand-guideline constraints. **Fallback if not permitted:** Use licensed or custom-drawn generic system/technology icons, or wordmark-free abstract representations. **AC:** A written approved/denied list of displayable logos exists before implementation.

GR-07 — Build a reusable technology logo component

Priority: P2 (dependent on GR-06) **Requirement:** Several sections require product logos rendered alongside tool names. Implement a single reusable component with a normalised asset set (consistent optical sizing, monochrome and full-colour variants, SVG format, light/dark surface support) rather than ad-hoc images per section. **AC:** One component and one asset directory serve the home page stack section, About page stack section, and any logo wall.

GR-08 — Content provenance and copyright audit [DEP]

Priority: P1 **Requirement:** The client requires written confirmation of the source of all written content — specifically the Insights articles. For each item, state whether it is originally authored, AI-generated, adapted from a third-party article, or reproduced.

Rationale: Copyright exposure. This is a legal risk item, not a design item. **AC:** A provenance register exists listing every Insights item with its source; any third-party-derived content is either rewritten, properly licensed, or removed.

GR-09 — Copy tone review: remove AI-generated tells

Priority: P2 **Current state:** Client flagged that dash-heavy descriptive copy *"reads like it was written by AI"*. **Requirement:** Audit body copy site-wide for the em-dash/en-dash-heavy construction pattern and other generic AI phrasing. Rewrite affected descriptions in a natural, human register. Reduce over-technical phrasing where it does not serve a business audience. **AC:** No section description contains more than one dash-joined clause; a human review pass is signed off.

5. Home Page (1)

HP-01 — Graphical treatment for the hero statistics band

Priority: P1 **Current state:** Key credibility statistics render as plain text: *15+ enterprise programs, SAP / Coupa / Oracle, APAC and Middle East*. **Requirement:** Each statistic must carry a supporting visual — an icon, a background graphic, or a flanking illustration semantically matched to its content:

- **Regions (APAC & Middle East):** world map, globe, or regional map motif — as a side icon or background element.
- **Platforms (SAP, Coupa, Oracle):** system/technology iconography, or the platform logos themselves (subject to GR-06), as adjacent or background graphics.
- **Programs delivered:** see HP-02.

AC: No statistic in the hero band renders as text alone.

HP-02 — Strengthen the "15+ programs" figure

Priority: P1 **Current state:** The figure reads as visually small and undersells the achievement. **Requirement:** Redesign the presentation of the delivered-programs count so it carries appropriate visual weight. Options to explore: large-format numeral typography, animated count-up on scroll into view, radial/progress visualisation, or a supporting visual metaphor. **AC:** The figure is a focal element of the band, not an inline text value. Client sign-off required on the chosen treatment.

HP-03 — Revise the hero background video

Priority: P2 **Current state:** The background video features maritime/shipping footage (vessel). The meeting footage with light animation is approved as-is. **Requirement:** Replace or supplement the maritime footage with technology-oriented content that better reflects the digital-transformation positioning. Retain the meeting sequence. Review and improve the accompanying graphics/overlays. **AC:** Revised video treatment presented for client approval. Video must be compressed, lazily loaded, `muted`/`playsinline`, with a poster frame fallback.

HP-04 — "Delivery Landscape" section: platform introduction

Priority: P2 [**DEP: Maaz**] **Current state:** Accepted as broadly okay, but Ariba, Coupa, Oracle, and Fieldglass appear abruptly with no build-up or hierarchy. **Requirement:** Improve the introduction and visual sequencing of these platforms. Client has explicitly deferred detailed direction on this section to Maaz. **Alternative proposed by client:** Consolidate all system logos into a comprehensive logo wall positioned high on the home page, so the breadth of platform coverage is immediately evident on first viewport — described by the client as an intentional "*bombardment*" of capability signals. **AC:** Maaz's direction obtained; one of the two approaches implemented.

HP-05 — "Enterprises Served" section: de-deck the client logo display

Priority: P1 **Current state:** Logos are correct, but the presentation is indistinguishable from a PowerPoint client-logo slide. The client notes this exact format is already used in their corporate profile deck, so reusing it on the website adds no value. **Requirement:** Design a web-native alternative for representing client companies. Patterns to explore: continuous marquee/ticker, interactive logo grid with hover-revealed engagement detail, logos integrated into a background composition, or a segmented display grouped by industry or region. **AC:** The section is visually distinct from the corporate deck treatment and could not be mistaken for a static slide.

HP-06 — "Delivery Evidence" / case studies

Priority: P3 **Current state:** Approved — content and presentation look good. **Requirement:** Optional exploration only. Investigate alternatives to the current box layout, consistent with

GR-03. No change required if a stronger pattern does not emerge.

HP-07 — "Impact" section refinement

Priority: P2 **Current state:** Broadly approved. **Requirement:**

- Upgrade icon quality and visual consistency.
- Apply gradient fills to tiles in place of flat colour.
- Add elevation so tiles lift off the page (see GR-05).
- General polish pass to raise perceived production value.

AC: Icons drawn from a single consistent set; gradient and elevation tokens applied.

HP-08 — "Stack We Work Across" section: full redesign

Priority: P1 **Current state:** The client's most negative feedback on the home page. The Source-to-Pay row renders as four undifferentiated boxes containing plain text tool names. Described as "*completely plain*" and "*a copy-pasted deck*". **Requirement:**

1. Complete visual redesign of the section, integrated with the site's colour system and theme rather than sitting on default white.
2. Display the respective product logo alongside each tool name — including but not limited to **S/4HANA**, **Zooper AI** (*spelling to be confirmed*), **Spend Console**, **DocuSign**, and **SAP**.
3. Subject to GR-06 logo clearance; at minimum, major-vendor logos such as SAP are expected to be usable.

AC: No tool is represented by a text label alone; section passes a "does this look like a slide?" review.

HP-09 — "Five Service Lines, One Accountable Team" copy revision

Priority: P2 **Current state:** Layout accepted. Copy flagged on two counts: overly technical register, and dash-heavy descriptions that read as AI-generated. **Requirement:** Rewrite descriptions in a business-facing register with natural phrasing (see GR-09). **AC:** Client sign-off on revised copy.

HP-10 — Page footer

Status: **Approved — no action required.** The end of the page is explicitly accepted as-is.

6. Book a Discovery Session (</book-a-discovery-session>)

BD-01 — Form visual redesign

Priority: P1 **Current state:** The client's strongest negative feedback on the site. The *content* of the form is explicitly praised — the questions are described as well-chosen and appropriate. The **formatting** is rejected. **Specific defects called out:**

- Page is entirely white, with no colour relief.
- Input fields appear dull, low-contrast, and visually inert.

Requirement:

1. Move the page off the all-white treatment. The client's specific suggestion: **make this page blue-themed**, since every page after the home page currently reads as white.
2. Redesign form input fields: stronger borders or filled surfaces, clear focus and hover states, improved label typography and spacing, visible validation states.
3. **Retain all existing questions unchanged** — content is approved.

AC: Form fields have visible default, hover, focus, filled, error, and disabled states. Page has a defined non-white background treatment. Keyboard focus order and accessible labels verified.

BD-02 — Await client-supplied reference designs [DEP]

Priority: P1 (blocks BD-01 sign-off) **Status:** The client has stated they will send **one or two sample designs** — a form they previously designed, plus a version they have since refined against the current Nexolve site design — as reference material for BD-01. **Action:** Do not finalise BD-01 until these references are received. If additional inspiration sources exist, present alternative directions alongside.

7. Services Page (</services>)

SV-01 — Redesign the services presentation

Priority: P1 **Current state:** Five tiles drop into a grid, one per service. The client's assessment: *"a very basic way of showing services"*, *"block block, tabular"*, and explicitly *"not enjoyable"*. **Requirement:** Research and propose a materially different presentation pattern. The client has directed the team to take inspiration from other websites and reference designs. Patterns worth evaluating:

- Horizontal scroll or scroll-pinned sequence
- Accordion / progressive-disclosure layout
- Alternating full-width feature rows with supporting imagery
- Interactive selector with a detail panel
- Diagonal, offset, or asymmetric composition

AC: At least two alternative directions presented to the client before build. Final pattern must not be a uniform equal-height card grid. **Note:** Per GR-03, this page is a strong candidate to be the reference implementation whose pattern is then replicated on Industries and Work.

8. Platforms Page ([/platforms](#))

PL-01 — Approved elements (no action)

- Overall page structure and layout: **good**.
- Card content for each service layer (Layers 1-5): **good**.
- Layer imagery: **good** — explicitly noted as complementing the blue theme well.

PL-02 — Colour and background remediation

Priority: P1 **Current state:** Background uses a solid grey fill described as dull. Cards lack colour. **Requirement:**

- Replace the solid grey background with a treated background per GR-02.
- Apply gradient colour to cards and add elevation so they lift off the surface (GR-05).

AC: No solid-grey full-bleed surfaces remain on the page.

PL-03 — Individual platform detail pages

Priority: P2 **Current state:** Interior/detail pages are described as *"a bit dull"* and needing *"life"*. **Requirement:** Apply the GR-01, GR-02, and GR-05 treatments to individual platform pages, not only the index page. **AC:** Detail pages carry the same colour rhythm and background treatment as the index.

9. Industries Page ([/industries](#))

IN-01 — Imagery replacement

Priority: P1 **Current state:** Imagery is broadly relevant and appropriate, with two rejections.

Industry	Client verdict	Action
Retail	Rejected — image does not work	Replace
Banking	Rejected — image is not right	Replace
FMCG	Okay	Retain
Oil & Gas	Good	Retain
Manufacturing	Okay	Retain
Energy & Mining	Okay	Retain

AC: New Retail and Banking images sourced and approved by the client. All imagery must be correctly licensed (see GR-08 principle).

IN-02 — Background treatment for the industry grid

Priority: P1 **Current state:** Same block-grid critique as Services. **Requirement:** The client accepts that a block layout may be a legitimate way to present industries. The requirement is therefore focused on the **surrounding treatment:** the background behind the grid must be lively and tech-driven rather than flat, so the page reads as an engaging website rather than a table. **AC:** GR-02 applied; the grid sits on a treated, brand-aligned background.

10. Work Page ([/work](#))

WK-01 — Layout refinement

Priority: P2 **Current state:** Content quality and content placement are **approved**. The only issue is the recurring tile/block layout. **Requirement:** Apply the approved pattern from SV-01 to this page. The client has explicitly stated that once one tab is solved correctly, the remaining tabs should follow the same established format as replicas. **AC:** Consistent with the approved reference pattern; no independent design direction required.

11. About Page ([/about](#))

AB-01 — "Stack We Work Across" section (About page instance)

Priority: P1 **Current state:** Same defect as HP-08 — plain tool names with no visual support. **Requirement:** Add logos, icons, and symbols for each tool, using the shared component from GR-07. Subject to GR-06 clearance. **AC:** No tool represented by a text label alone.

AB-02 — Team profile imagery

Priority: P1 **Current state:** Maaz's name is present and correct, but there is no photograph. **Requirement:**

- Add a profile photograph for Maaz.
- Add the remaining team members with names and, where available, photographs.

AC: Team section renders name + photo + role for each listed member; a consistent fallback (initials avatar or silhouette) exists for members without a photo. Photo consent obtained per person.

AB-03 — Correct the "The Team" section heading

Priority: P1 **Current state:** A section headed "The Team" contains company achievements/metrics rather than team member information. The heading does not describe its content. **Requirement:** Rename the heading to accurately reflect the content — e.g. "Our Track Record", "By the Numbers", "What We've Delivered". Final wording subject to client approval. **AC:** Heading matches section content; no orphaned or mismatched headings elsewhere on the page.

AB-04 — Achievement figures visual treatment

Priority: P1 **Current state:** The numbers read as bland and appear black, despite the client being able to confirm the specified colour is blue. This suggests either an insufficiently saturated blue, a contrast/rendering issue, or typography too small and light to register the colour. **Requirement:** Redesign the statistics presentation for visual impact: larger display typography, stronger or gradient brand colour, count-up animation on scroll, supporting iconography, or a dedicated banded background. **AC:** The applied colour is unambiguously perceptible at rendered size on both desktop and mobile. Rendered colour values verified against design tokens.

AB-05 — "What We Believe" section

Status: Approved — no action required.

AB-06 — Overall About page

Status: Assessed as **decent** with no structural concerns beyond AB-01 to AB-04.

12. Insights Page (</insights>)

IS-01 — Content provenance disclosure [DEP]

Priority: P1 — see GR-08. **Requirement:** The client has directly requested the source of the Insights content — whether it was originally authored, generated with ChatGPT or similar, or taken from existing articles — expressly in order to avoid a copyright issue. **AC:** Written provenance statement supplied per article.

IS-02 — Replace the tile layout

Priority: P2 **Current state:** Content selection is **approved**. The tile-based presentation is not. **Requirement:** Redesign the Insights listing away from uniform tiles. Patterns to consider: editorial-style layout with a featured lead article, mixed-size masonry grid, list

view with strong typographic hierarchy, or category-filtered layout. **AC:** Layout is visually distinct from the Services and Work grids.

13. Dependencies and Open Items

ID	Item	Owner	Blocks
D-01	Reference form designs to be sent by client	Client	BD-01
D-02	Logo usage rights confirmation	Maaz	HP-08, AB-01, GR-07, HP-04
D-03	Design feedback on Delivery Landscape section	Maaz	HP-04
D-04	Second-pass design review of the full site	Maaz	Sign-off
D-05	Content provenance register for Insights	Implementation team	GR-08, IS-01
D-06	Confirm correct spelling of "Zoopar AI"	Implementation team	HP-08
D-07	Approved reference pattern for card/tile layouts	Implementation team → Client	SV-01, WK-01, IN-02, IS-02
D-08	Team member photographs and consent	Client / Maaz	AB-02

14. Delivery Process

The client has specified the following sequence:

1. **Implement** the feedback in this document.
2. **Collect Maaz's feedback** in parallel — the client has explicitly asked that Maaz review the site independently before finalisation.
3. **Client re-review** of the revised build.
4. **Final touches** applied based on that review.
5. **Sign-off call** to close out the revision cycle.

The client has requested a response with any comments or questions on this feedback before implementation begins.

15. Recommended Implementation Sequence

Ordered to unblock dependencies early and establish reusable patterns before mass application:

Phase 1 — Foundations (GR-01) colour system → (GR-02) background system → (GR-05) elevation scale → (GR-07) logo component *Rationale: these are design tokens and shared components. Every subsequent requirement consumes them.*

Phase 2 — Reference pattern (SV-01) Services redesign *Rationale: the client directed that one tab be solved first and replicated. Services is the weakest offender and therefore the best proving ground.*

Phase 3 — Replication (WK-01), (IN-02), (IS-02), (PL-02), (PL-03) *Rationale: apply the approved Phase 2 pattern.*

Phase 4 — Home page (HP-01), (HP-02), (HP-05), (HP-08), (HP-07), (HP-03), (HP-04) *Rationale: highest visibility, but depends on the Phase 1 token system being settled.*

Phase 5 — Discrete items (BD-01) (on receipt of D-01), (AB-01) to (AB-04), (IN-01), (GR-09) copy pass

Parallel track (non-blocking, start immediately) (GR-08) / (IS-01) content provenance audit, (GR-06) logo clearance *Rationale: these are legal-risk items with external dependencies and long lead times.*

16. Notes on Transcription Accuracy

The following items were transcribed from an Urdu/English voice note and should be verified before implementation:

- **"Zoopar AI"** — product name uncertain; confirm the correct vendor and spelling.
- **"Spend Console"** — confirm whether this is a third-party product or an internal Nexolve platform name.
- **Page and section names** used as headings in this document are inferred from the client's spoken references and should be reconciled against the actual routes and section titles in the repository.
